

BAKER M.B.S.

BAKER MOBILE BLASTING SERVICES offer specialist cleaning and preparation to vessels within the industrial sector. We have exceptional knowledge of the removal of various residues, and preparation carried out to the correct specifications such as ISO SA standard.

We are able to clean and prepare various substrates such as steels, concrete, brickwork etc to remove rust, old coatings, process residue to name a few.

Working jointly with contractors that have a proven track record we can offer a full preparation service:-

- *Removal of waste products from tanks, pits, etc., providing correct waste documentation;*
- *High pressure jet washing and disposal of contaminants*
- *Grit blast surface in preparation for a new lining system or new product containment.*

Our staff are confined space trained, hold CSCS and CCNSG safety cards.

There are various ways of cleaning and preparing substrates but none surpass Grit-blasting when you require a truly clean surface or the substrate prepared to a standard suitable for applying a protective coating or lining system.

As we are leaders in the lining and coating industry we have excellent knowledge on cleaning and preparation which obviously will greatly assist on any individual Grit-blasting project.

Baker MBS know that Health & Safety is just as, if not more important than the project itself. For that reason we carry out a full on site assessment of each and every project and supply all documentation as required by law such as Risk Assessment, Method Statement and C.O.S.S.H.

We will also supply our Health & Safety and Environmental policy and any other documentation specific to the project.
